

Biopeptide Biocosmetic™

An elegant base for cosmetic formulations.

PCCA # **30-3377**

A moisture-rich, highly versatile cosmetic base for patients concerned about the appearance of aging skin.

Biopeptide Biocosmetic is a topical cream featuring an advanced, phosphate-based emulsifier system, ideal for patients seeking a cosmetic option for aging skin. This rich peptide cream is packed with skin-loving oils, derived from avocado, macadamia, almond and grape, that provide long-lasting moisturization and may help protect the skin's natural barrier. Biopeptide Biocosmetic provides hydration that may help soften the look of redness and support skin's natural collagen.

When used with active pharmaceutical ingredients (APIs) or cosmetic ingredients, Biopeptide Biocosmetic's phosphate emulsifiers enable the simultaneous release of both oil-soluble and water-soluble ingredients, making this base a highly versatile choice for aging skin.

FEATURES & BENEFITS

- Features a natural barrier that helps maintain skin hydration.
- Formulated for mature skin to support a more youthful look.
- Designed with ingredients commonly used for skin prone to redness, fine lines and wrinkles.
- Supports skin hydration and a balanced feel.

FORMULATED WITHOUT

- Parabens

- Soothing skin care
- Dry skin moisturizer

PLEASE NOTE

Always make sure you have checked the PCCA formula database and are following the most up-to-date version of a formula, as changes are continually made to existing formulations to provide the highest quality. The formulas and/or statements listed are provided for educational purposes only. They are compounding ideas that have commonly been requested by physicians and have not been evaluated by the Food and Drug Administration. Formulas and/or material listed are not to be interpreted as a promise, guarantee, or claim of therapeutic efficacy or safety. The information contained herein is not intended to replace or substitute for conventional medical care or encourage its abandonment. Every patient is unique, and formulas should be adjusted to meet their individual needs.
